

# **A Selection of Labor Force Survey Results**

**Autumn 2011 (September 23-December 21)**

## **Introduction**

The pair concepts of employment and unemployment are so basic to national economies that any rise in employment rate - which means a drop in unemployment - is reckoned as an indicator to the national development. Moreover, the unemployment rate is an indicator for appraising the economic conditions of the country. To quarterly and annually estimate the labor force indicators in Iran, the labor force survey is conducted on a seasonal basis across the nation by using Rotation Sampling. As the survey is over, the outcomes are compared with those of the previous rounds in order to observe the possible changes in indicators over seasons at the national, urban, rural and provincial levels. The survey was first conducted in 2005 and since then has regularly been taken in the middle month of every season. Another survey titled Household Employment and Unemployment Characteristics Survey (HEUCS) would be implemented before L.F.S. The HEUCS was first taken in 1994 and repeated in the years 1997 to 2000 once a year from October 23 to November 22. From 2001 to 2003, it used to be taken on a seasonal basis, middle month of every season, while in 2004 it was only executed from April 21 to May 21 and October 23 to November 22. To improve the HEUCS quality and its conformance with the international concepts, particularly those of the ILO, the survey plan was revised into the current Labor Force Survey.

The rotational nature of the survey requires drawing on a basic sample- a sample out of which sub-samples might be taken to be used in different rounds of a certain survey or in different surveys. The basic sample of the Labor Force Survey for the years 2005-2008 was taken from the 2002 National Establishments Census frame. Following preparation of the basic sample, officials managed to prepare the list of households lied in the fall 2004 basic sample clusters in order to be able to select the sample households based on the rotation pattern chosen for different rounds of the survey. The new basic sample was designed based on the listing information of the Population and Housing Census 2006 as of the year 2009.

## Definitions and concepts

### Economically active population

All people aged 10 or over ( a specified minimum age) who according to the definition of work have been taking part in production of goods or services (employed ) or have been able to take part in production of goods or services( unemployed) during the calendar week preceding the survey week ( reference week ) are considered as economically active population.

#### ❖ Employed

All people aged 10 or over who according to the definition of work have worked for at least one hour <sup>1</sup>during the reference week or have temporarily left their job for one reason or another, are reckoned as employed. The employed are divided into two major groups of wage/salary earners and the self-employed. Being temporarily absent from the job within the reference week, while having a formal attachment to the job by the wage/salary earners and continuation of the business by the self-employed, is considered employment. The following people are also considered employed due to their critical role in the national economic activity.

- ❖ Persons who, without receiving any remuneration, work for a member of their household that is a relative (unpaid family workers).
- ❖ Trainees who perform an activity in relation to the activity of the workshop during the training period. In other words, they directly contribute to the production of goods or services and their activity is considered "work".
- ❖ Students who have worked during the reference week, according to the definition of work
- ❖ All people who are serving as permanent and temporary cadre in the armed forces (armed forces, cadre personnel, soldiers, commissioned officers, non-commissioned officers of the military forces and the police).

### Unemployed

The unemployed are all people aged 10 or over who:

1. have no job during the reference week ( not engaged in a wage/salary job or self-employment,)
2. are available to work during the reference week or the following week ( available for a wage/salary job or self-employment,)
3. have been seeking job during the reference week and the preceding three weeks ( have taken specific steps to seek paid employment or self-employment).

All people who because of expecting to start a job in near future or return to their former job have not been seeking a job - had no job but have been available to work - are also considered unemployed.

---

<sup>1</sup> According to ILO standards

## Underemployed

The underemployed are all employed people who have been present in or temporarily absent from the workplace and have worked less than 44 hours during the reference week due to economic reasons such as work recession, not finding a job with more hours, or non-work season, but have been willing and ready to do more work.

## Indicators

### *Economic participation rate (activity rate)*

The ratio of the active population (employed & unemployed) 10 years of age or over (15 years of age or over) to the working age population 10 years of age or over (15 years of age or over) multiplied by 100.

$$\text{Economic participation rate} = \frac{\text{Economically active population aged 10 or over (aged 15 or over)}}{\text{Population aged 10 or over (aged 15 or over)}} \times 100$$

### Unemployment rate

The ratio of the unemployed population to the active population (employed & unemployed) multiplied by 100.

$$\text{Unemployment rate} = \frac{\text{Unemployed population}}{\text{Active population}} \times 100$$

### Unemployment rate of the population aged 15-24 ( 15-29 years old)

The ratio of the unemployed population aged 15 -24 (15-29 years of age) to the economically active population at age 15-24 (15-29) multiplied by 100.

$$\text{Unemployment rate aged 15-24 (15-29)} = \frac{\text{Unemployed population aged 15-24 (15-29)}}{\text{Economically active population aged 15-24 (15-29)}} \times 100$$

### Underemployment rate

The ratio of the underemployed population to the active population multiplied by 100

$$\text{Underemployment rate} = \frac{\text{Underemployed population.}}{\text{Employed population.}} \times 100$$

**Seasonal labor force indicators**

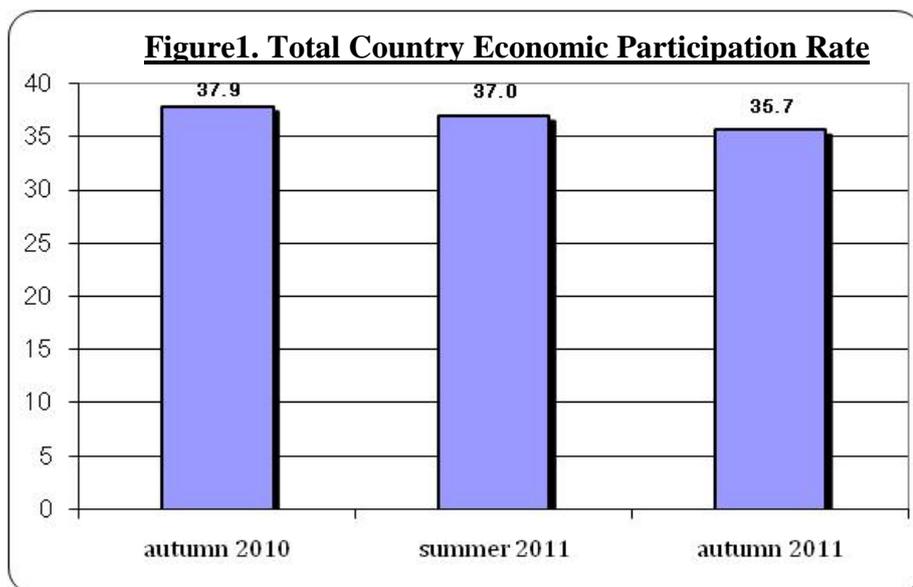

Table 1 contains the major labor force indicators resulted from the survey in the autumn 2011 (September 23- December 21). Table 2 reflects the changes in the labor force indicators compared to the previous season (summer 2011) and the corresponding season in the previous year (autumn 2010) ; table 3 provides similar comparisons at provincial level.

**Table 1. Labor force indicators by sex, urban and rural areas; Autumn 2011**

The contribution of the employed aged 15 or over with regular working hours of more than 49		<b>40.5</b>	<b>44.7</b>	<b>14.9</b>	<b>42.9</b>	<b>34.6</b>

Note: Difference in the total is due to rounding figures.

A review of the economic participation rate reveals that about 35.7 % of the working age population (10 years or over) are economically active; i.e., they lie either in the employed or the unemployed group. In addition, the results indicate that the economic participation rate stands lower for women in comparison to men and urban areas in comparison to the rural areas. The review of economic participation rate shows 2.2 % and 1.3 % falls as compared with the last corresponding season (autumn 2010) , and the previous season (summer 2011) respectively.

The unemployment rate among population aged 10 and over mentions that a percentage of 11.8% of the economically active population were unemployed. Based on the results, the unemployment rate was higher for women and urban areas than men and rural areas. Review of the changes happened in the indicator at national level shows a 0.3% decrease in comparison to the last corresponding season (autumn 2010) and a 0.7 % increase in comparison with the previous season (summer 2011) respectively.

The unemployment rate among population aged 15 and over mentions that a percentage of 11.8% of the economically active population was unemployed. Based on the results, the unemployment rate was higher for women and urban areas than men and rural areas.

The underemployment indicator tells that 8.1% of the total employed population was underemployed. The indicator stands higher for men and rural areas than for women and urban areas.

A review of employment in major economic sectors indicates that the services sector holds the biggest share of employment with 48.3% of the total, followed by manufacturing sector with 34.2 % and agriculture sector with 17.5 %.

The unemployment rate of the economically active population aged 15-24 stood at 26.3 % while standing higher for women and urban areas than for men and rural areas. Comparing the last corresponding season (autumn 2010) and the previous season (summer 2011) shows that the indicator experienced a 0.4 % decrease and a 1.6 % increase respectively.

The unemployment rate among the economically active population aged 15-29 indicates that 23.9% of the active population was unemployed. This indicator stands higher for women and urban areas than men and rural areas. Review of the changes shows that the indicator has experienced 0.1% and 1.4% increases in comparison to the last corresponding season (autumn 2010) and previous seasons (summer 2011) respectively.

Review of contribution of the employed population aged 15 or over with the working hours over 49 shows that about 40.5% of them work more than 49 hours a week. As a decent work indicator, it reveals that a great share of the employed population of the country works more than the standard hours.

Table 2. Changes of major labor force indicators by sex, urban and rural areas (Autumn 2011 compared with summer 2011 and autumn 2010 percent)

Labor force indicators	Total country				Male				Female			
	Summer 2011		Autumn 2010		Summer 2011		Autumn 2010		Summer 2011		Autumn 2010	
	Change	Rate	Change	Rate	Change	Rate	Change	Rate	Change	Rate	Change	Rate
Economic participation rate of population aged 10 and over	-1.3	37	-2.2	37.9	-1.6	61.3	-1.8	61.5	-1.1	12.4	-2.6	13.9
