

# 19 Household Expenditure and Income

**T**he household expenditure and income (household budget) was first studied in the year 1314 by the National Bank of Iran. The main objective of the study was to obtain the consumption coefficients for calculation of living expenditure index.

After a long cease, in the year 1338, Economic Studies Office of the National Bank of Iran undertook a survey on the field by interviewing sample households in 23 cities of the country to revise the weight of the living expenditure index. The Central Bank of Iran has constantly conducted studies on urban households expenditure and income since the year 1344. In addition, survey of households expenditure in urban areas, on a larger scale, was taken by the SCI in the year 1347. Since the year 1353, the survey has covered both expenditure and income of urban households and continued to date, excluding the years 1355, 1357 and 1360.

The results have been processed and published annually.

Survey of rural households expenditure and income was first conducted by the General Department of Public Statistics in the year 1342, and by the establishment of the SCI in the year 1344, the survey continued in a larger scale by the new organization.

Currently, statistics on urban households expenditure and income are released by both the Central Bank and the SCI, and those on rural households are released by the SCI.

In this chapter, the statistics on annual food and non-food average expenditures of urban and rural households have been presented by deciles of expenditure and household size, and data on the average urban and rural households annual income by income sources, has been presented through the results of the SCI's (sample) surveys taken according to the United Nations recommendations (NHSCP<sup>(1)</sup> and SNA<sup>(2)</sup>).
